

TANK CIVIL

TANK JAMMERDEFENSE

First they shut down your ability to call for help. Then they come in.

A single jammer cuts off, all at once, the panic button, the alarm, the sensors and your staff's radios. JammerDefense makes that silence visible, so you know you are under attack while it is happening.

8×8 m

precision with Hyperlocation

Even in the worst case: an enclosed parking garage, where the signal bounces and gets absorbed.

53 ha

coverage with one sensor

Up to 53 hectares with one sensor (about 131 acres), a radius of 410 m.

01

You know you are under attack while it happens.

The silence of your systems becomes an alert, in time to act.

02

Your team goes to the right place.

With One you know the zone, with Sector the floor and with Hyperlocation an 8×8 m square.

03

You get a record that holds up.

Tank Mission Control records the dispatch, the closure and the validation.

WHAT IT PROTECTS

Panic buttons • Alarm systems • Sensors • Security radio communications • Any critical wireless system

WHERE

Homes • Retail • Banks and vaults • Government institutions • Critical infrastructure

PARAMETER	VALUE	CONDITION
Detection and location		
Protected systems	Panic · alarm · sensors · radios	Covers many more technologies than vehicle protection
Frequency range	70 MHz to 6 GHz	Range in which the sensor detects jamming
Coverage per fixed sensor	Up to 53 ha	Equivalent to a radius of 410 m
Certainty with Hyperlocation	8×8 m	Even in the worst case
Service		
Operation	24/7	—
Alert management	Tank Mission Control	—
Integrations	CAD and cameras	—

WHAT'S INCLUDED

- Fixed sensors with 24/7 coverage
- Tank Mission Control: dispatch, closure and record
- Tank Academy: certified guards and operators
- Calibration, monitoring and maintenance by Tank
- Integration with your CAD and your cameras

LEGAL FRAMEWORK

Since December 2024, Chile's Law 21.720 makes it a crime to sell, carry or use a signal jammer. Tank doesn't replace the security you already have; it makes it work again.
